ANNOTATION LEGEND

P = Perceivable | O = Operable | U = Understandable | R = Robust

2.2.2 = WCAG Criteria Violation | 1 = Explanation Reference Number

HOME PAGE ANNOTATIONS

1 O 2.1.1 Important page functionality was found to be not operable via keyboard only, involving focusable elements in the original sub-menus that were not reachable and did not have discernible visible focus. For purposes of a more logical structure and content better reflecting user needs, the main menus previously reflecting the parent organization (Utah Olympic Legacy Foundation) were revised to reflect components for the venue (Utah Olympic Oval) only along with a new separate link to the free-standing Foundation website. The previous sub-menus employed in the original site design (for the various venues underneath the Foundation) have been dispensed with in these wireframes; these components thus no longer need to be reachable.

2 O 2.4.4 Descriptive names or context explaining the purpose of each link are not provided for all links (e.g. the social media icons at the top of the page and places where "Explore" is the link text without a more descriptive name or context). Descriptive names or context for all such links must be provided so that users with visual and/or cognitive disabilities can navigate more easily and fully understand what each link will do.

3 R 4.1.2 Components like the social media icons and the Utah Olympic Legacy Foundation logo in the footer do not have discernible text, thus not meeting the criteria that all user interface components (e.g., links, buttons, form fields, etc.) need to provide programmatically determinable information about their name and role. Ensure that all these user interface components provide programmatically determinable information about their name and role. This can be achieved by using descriptive text or ARIA labels to provide a clear name and semantic HTML or ARIA roles to define the purpose of elements.

4 P 1.4.3 Purchase Ticket CTA needs to have a contrast ratio of 4.5:1 or greater to achieve desired contrast ratio. Current white (#FFFFFF) on orange (#FFA433) is insufficient (contrast ratio of only 1.97:1)

5 P 1.4.1 1.4.3 Links or buttons that use color alone to indicate changes in state need to use means other than just color to convey meaning. So, any such buttons or links that merely change color upon hover must have another visual cue added, such as underlines, bold or italics, or other focus indicators (like visible focus outlines). Additionally, the color used for state of change must have a contrast ratio of 4.5:1 or greater to achieve WCAG minimum contrast ratio.

6 P 1.1.1 Alternative text (alt text) must be incorporated into the site code for all non-text content in order to help people who have difficulty perceiving visual content.

7 O 2.2.2 The auto-rotating carousel images at the top of the page cannot be stopped or paused from rotating, which presents an issue to some users with cognitive disabilities. A visible pause/play button should be added to the carousel, and the carousel should not start automatically (i.e, should be static by default). NOTE: Moderate issue only but would be a nice feature to incorporate.

8 P 1.4.11 1.4.1 Upon hover, these program promo boxes overlapping the main carousel can be distinguished from the background only by a slightly darker drop shadow and an insufficient, low contrast (1.97:1) orange bar at the top of the frame. A high contrast border with a ratio of at least 4.5:1 around the box will provide a more visible and necessary indication of focus. The "Explore" link text also cannot rely on color alone (as is currently the case) to indicate a change in state and thus should make use of underlines, bold or italics.

9 O 2.1.1 2.4.7 These sections are plagued by coding that results in redundant and inefficient navigation for keyboard-only users. Tabbing through components with a keyboard in these sections means users must tab through the same cycle of items three times before focus is finally achieved and the component is reachable. Until that is achieved, proper visible focus indicators are also missing, keeping keyboard users from being able to discern which elements have keyboard focus. This latter point can be achieved by ensuring the focus is easily noticeable against the background (i.e., more than just a drop shadow).

10 P 1.2.3 An audio description must be provided for the promo video in order to augment the audio portion of the video. This description should provide information about important content in the video that is not described or spoken in the main audio track

11 O 2.1.1 This focusable element for learning more about the location of the Oval is not reachable via keyboard only. Important page functionality must be operable via keyboard and any pointer actions must have an equivalent for keyboard only so that everything that can be done with a mouse click, tap, etc. can be done with a keyboard.
